# MA Motion on Google Play

Follow this from the top. Each section tells you where to click and exactly what to type. Do not publish to production yet.

10 November 2026 · Package `com.mamotion.ma_motion_mobile` · Version 1.0.0 (1)

**Do these in order.** Create the app. Fill in the policy questions. Fill in the store listing. Upload an internal test build. Stop there.

---

## Answers you will reuse

| | |
|---|---|
| App name | **MA Motion** |
| Language | **English (United States)** |
| App or game | **App** |
| Price | **Free** |
| Package name | `com.mamotion.ma_motion_mobile` |
| Category | **Art & Design** |
| Ads | **No** |
| Payments inside the app | **No** |
| For children | **No. Age group is 18 and older only.** |

The package name is locked the first time you upload a build. Upload a build made from this project only.

---

## 1. Create the app

Open play.google.com/console with the Google account that should own MA Motion.

1. Click **Create app**.
2. App name: **MA Motion**
3. Default language: **English (United States)**
4. Choose **App**.
5. Choose **Free**.
6. Tick the policy boxes. The export-law box is fine: the app only uses normal HTTPS.
7. Click **Create app**.

Play opens a dashboard of tasks. Work through sections 2, 3, and 4 next. Leave production alone.

## 2. Policy questions

In the left menu open **Policy and programs**, then **App content**.

### Privacy policy

> **Stop here until you have a real web page.** Play will not accept the app without a public privacy policy link. The app collects a name, email, password, and salon photo. Paste that page's address when it exists. Do not type a fake link.

### App access

Choose **All or some functionality is restricted**. Google's reviewer has to be able to sign in.

Instructions to type:

```
Install the app. Sign in with the Maker demo account. The account should already have a finished Maker profile so discovery opens.
```

Leave the demo email and password blank until you have a real Maker login on the live API.

### Ads

Answer **No**. This app does not show ads.

### Content rating

Start the questionnaire. Pick the art and design category, not a game.

- **No** to violence, sex, bad language, drugs, gambling, and crude humor.
- **Yes** to people sharing images. Makers upload a salon photo, and other people can see artwork.

Submit it and apply the rating Play gives back.

### Age

- Target age: **18 and older** only.
- The app is **not** made for children.
- Do not join Designed for Families.

### News, government, money, health

Answer **No** to all of these. MA Motion is not a news app, a government app, a payments app, or a health app.

### Data safety

The app sends account details to your own server over HTTPS. It does not sell data. It does not use data for ads.

| | |
|---|---|
| **Name** | Collected. Not shared. Used for the account. |
| **Email** | Collected. Not shared. Used for the account. |
| **Password** | Collected. Not shared. Used only to register or sign in. |
| **Photos** | Collected. Not shared. This is the salon image from the photo library. |
| **Location, crashes, how people tap** | Not collected in this version. |

- Encrypted in transit: **Yes**.
- Can users ask for their data to be deleted: **Yes, by emailing support**. Do not say there is a delete button in the app. There isn't one yet.

---

## 3. Store settings

Left menu: **Grow users**, then **Store presence**, then **Store settings**.

- Category: **Art & Design**
- Email: a mailbox you actually read
- Phone: fill it in if the form asks
- Website: optional

---

## 4. Store listing

Left menu: **Grow users**, then **Store presence**, then **Store listings**. Open the English (United States) listing.

### Name

```
MA Motion
```

### Short description

56 characters. The limit is 80.

```
Join as a Maker, set up your salon, and discover artwork.
```

### Full description

```
MA Motion is a place where art and design live.

Join as a Maker. Create your account, write your profile, and choose a salon image from your photo
library. Add your location, website, and contact email, then choose the types and styles that
describe your work.

When your profile is ready, discover artwork, search the collection, and filter by type, style,
and location.

This release is the Maker app. Sign in with a Maker account to use it.
```

Do not write about the Appreciator button. In this build it does nothing.

### App icon

Upload this picture. Play will round the corners. Do not round them yourself.

`docs\play-console\icon-512.png`

512 × 512. Made from assets\logo.png, on the app's dark green.

### Feature graphic

The wide banner at the top of the store page. Upload this picture.

`docs\play-console\feature-graphic-1024x500.png`

1024 × 500. Same logo.

### Phone screenshots

> **Not ready.** Play needs at least two phone screenshots. Send them and they will be added here. Useful shots: splash, sign in, Maker registration, discovery, and filters.

---

## 5. App signing

Left menu: **Test and release**, then **App integrity**.

Choose **Play App Signing**. Google keeps the key that proves the app is yours. This project uses a separate upload key to send builds to Google.

| | |
|---|---|
| Upload key file | `android\upload-keystore.jks` |
| Alias | **upload** |
| SHA-1 | `3E:2E:E2:FB:33:86:3D:A8:58:F4:0A:5B:27:6E:CC:6E:00:7D:B6:2B` |
| SHA-256 | `99:39:85:9A:16:59:70:8A:70:62:CF:6B:A3:89:EF:28:29:1E:18:8A:E0:40:7E:83:4D:04:9F:6E:B1:9E:D3:34` |
| Valid | 10 November 2026 through 28 March 2054 |

The password is only in `android\key.properties`. Release builds already use this key. Do not reset it.

---

## 6. Build the file Play wants

On your computer, in the project folder, run this. Replace the web address with the real API.

```
flutter build appbundle --release --dart-define=MA_API_BASE_URL=https://YOUR_API_HOST
```

Upload this file:

`build\app\outputs\bundle\release\app-release.aab`

> If you leave out `MA_API_BASE_URL`, sign-in goes to a fake address and the reviewer cannot log in.

---

## 7. Internal testing

Left menu: **Test and release**, then **Testing**, then **Internal testing**.

1. Choose the countries for testers.
2. Create a release.
3. Upload `app-release.aab`.
4. Release name: **1.0.0 (1)**
5. Release notes: paste the line below.
6. Check the package is `com.mamotion.ma_motion_mobile` and the version is 1.0.0 (1).
7. Roll out to **internal testing only**.

```
First Maker release. Create an account, set up your salon profile, and discover artwork.
```

Add tester email addresses and send them the opt-in link.

> A new personal Play account often cannot go to production until 12 testers have joined a closed test for 14 days. The dashboard will say if this applies. Stay on internal testing until that is done, or until Play says you do not need it.

## Do not publish yet

These are still missing:

- Privacy policy web address
- Support email, and a phone number if Play asks
- Maker demo login for the reviewer
- Phone screenshots
- The real API address inside the uploaded build
- A delete-account button. The server can delete an account. The app does not show that yet.

The name, descriptions, icon, and feature graphic are ready to paste now.
